## Motorized Door Operator Benefits, Door Knob Pricing – The Best Of Both Worlds

Product selection for commercial privacy locks has barely changed in decades. The introduction of the automatic door opener in the 1970's, intended to help those with mobility challenges, was the first and only alternative to the manual door handle. Unfortunately, the high costs associated with electrically powered door openers remain a serious limitation to mass adoption as a solution for hands-free door navigation.

The ancient and low cost traditional door handle has long had the misfortune of heavy reliance on the human hand for proper operation. Continued use of this hands-only design to open doors in public places cannot continue in a post-pandemic world where fomite surfaces like door handles can spread disease.

No other door opening solution has managed to combine the best attributes of these two established product types until now. When the relevant facts are compared, the Restroom UP LoK™ is clearly the best choice, ***hands down***.

	Hands-Free Optional	Lock Status Indicator	Cost	Installation
A – Automatic door opener with sensor	Yes	No	\$\$\$\$	Complicated
B – Traditional Commercial Privacy Lock	No	No	\$	Fairly easy
C – Restroom UP LoK™	Yes	Yes	\$	Very easy
