INSTALLATION GUIDE

Tools Required:

Installation Instructions:

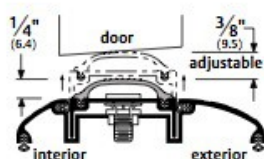

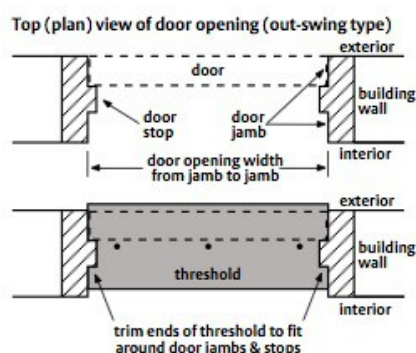

Figure 1

1. For best seal, in-swing door should be beveled $\frac{1}{8}$ " (3.2 mm) longer on inside. (See Figure 1).
2. Measure width of door opening from jamb to jamb and stop to stop and mark ends of threshold for trimming.
3. Trim ends of threshold to fit around door jambs and stops, so that vinyl top is centered under door.
4. Trim vinyl to $\frac{1}{16}$ " longer than trimmed threshold at each end.
5. Lift vinyl-top on free edge, revealing adjusting screws and mounting holes. Place threshold in position and mark through mounting holes for floor drilling.
6. Remove threshold and drill pilot holes in floor at marks.
7. Press vinyl feet into grooves at underside of threshold legs.
8. Caulk ends of threshold (important for effective sealing and moisture control).
9. Secure threshold to floor with supplied screws. (When fastening to concrete, use anchors; anchors not included.)
10. Lift vinyl-top on free edge and adjust each adjusting screw until approximately $\frac{1}{4}$ " remains between the bottom of the door, when closed, and the top of the adjustable aluminum channel.
11. Insert free edge of vinyl-top into available retainer slot. Inspect to see that the vinyl-top is sealing against the bottom of the door when the door is closed. Remove one edge of vinyl-top from slot to access adjusting screw and re-adjust as necessary.
