

For door panel weight up to 20 kg (44 lbs.)
 Door panel height: maximum of 1000 mm (39 3/8")
 Door panel width: maximum of 1600 mm (63")
 Door panel thickness: minimum of 16 mm (5/8")
 Side panel thickness: minimum of 16 mm (5/8")

- Independent vertical sliding door system for wood doors
- For inlay or overlay doors

Remember to take the weight of the door handle into account when calculating the total door weight.

Weight of door	
+ Weight of sliding door hardware (=0.050 kg or .11 lb)	
+ Weight of door handle	
<u>= Total weight of the door</u>	

Weight of the door panel = Width in square inches x height in square inches x weight (lb) in square inches

Square inches = Total weight of door/weight in lb/square inches based on counterweight material.

$$\begin{array}{r} \text{Interior cabinet width} \\ - 118 \text{ mm (4 11/16")} \\ \hline = \text{Width of counterweight} \end{array}$$
$$\text{Height of counterweight} = \frac{\text{Square feet of counterweight}}{\text{Width of counterweight}}$$
